Project Logs and Meeting Summaries
(The Code Theorists)
Stage I
(As of 24/10/2026)

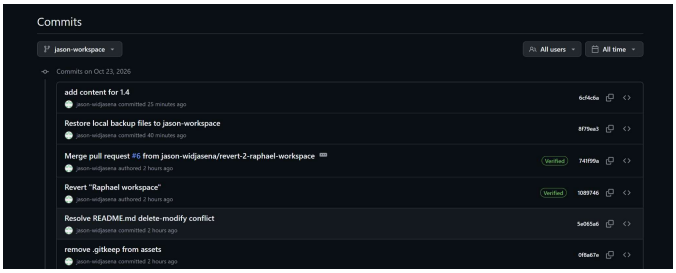

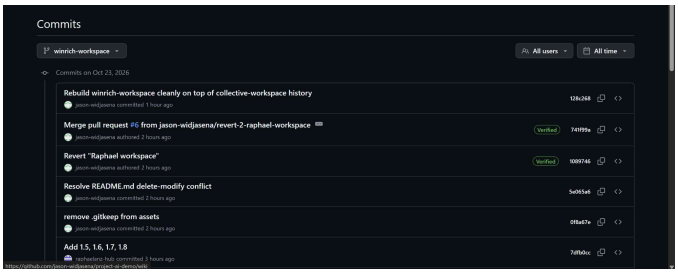

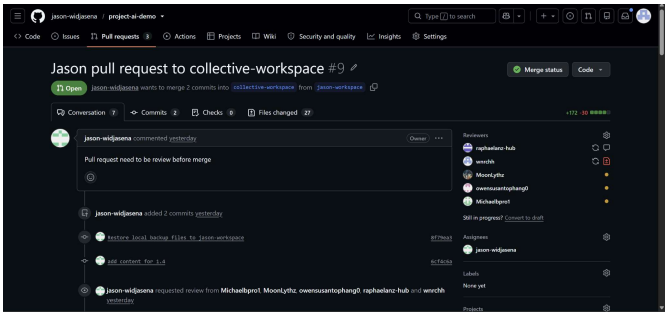

A. Project Logs

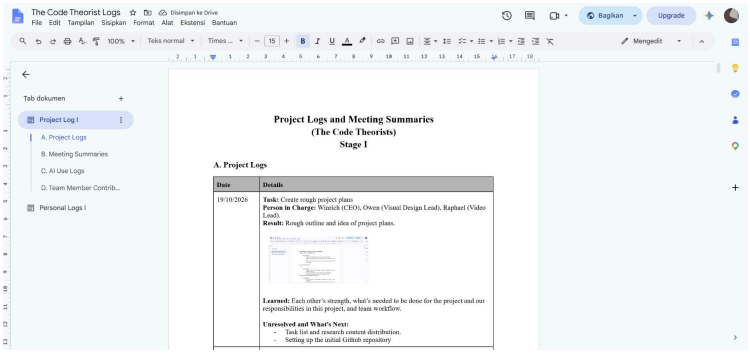

Date	Details
19/10/2026	**Task:** Create rough project plans **Person in Charge:** Winrich (CEO), Owen (Visual Design Lead), Raphael (Video Lead). **Result:** Rough outline and idea of project plans.  **Learned:** Each other's strength, what's needed to be done for the project and our responsibilities in this project, and team workflow. **Unresolved and What's Next:** - Task list and research content distribution. - Setting up the initial GitHub repository
19/10/2026	**Task:** Initial GitHub setup **Person in Charge:** Jason (CIO) **Result:** GitHub Setup **Learned: -** **Unresolved and What's Next:** - Adding branches for each member. - Reorganizing repository files - Research content outline plans.
20/10/2026	**Task:** Research content outline plans **Person in Charge:** Kenneth (Quality Lead), Michael (Content Lead) **Result:** Content outline draft 

	Learned: - **Unresolved and What's Next:** - Task list and research content distribution. - Deciding content scope
21/10/2026	**Task:** Finished project plan and task list **Person in Charge:** All Members **Result:** Completion of project plan and task list   **Learned:** Deadlines should be reminded more often and teammates should be more active in communication outside of meetings. **Unresolved and What's Next:** - Start writing markdown content
22/10/2026	**Task:** Added markdown content 1.12, 2.1, and 2.2 **Person In Charge:** Winrich (CEO) **Result:**  (Original commit history was lost while fixing GitHub repository) **Learned: -** **Unresolved and What's Next:**

	- Add mathematical concepts of artificial neuron
23/10/2026	**Task:** Added markdown content 2.6 **Person In Charge:** Owen (Visual Design Lead) **Result:**   **Learned:** Understanding the different types of major neural networks. **Unresolved and What's Next:** - Structuring each topic to make it interconnected with each other. - Finalization of initial draft and Review with group
23/10/2026	**Task:** Added markdown content 1.1, 1.2, 1.3, 1.4 **Person In Charge:** Jason (CIO) **Result:**  (Original commit history was lost while fixing GitHub repository) **Learned: -** **Unresolved and What's Next: -**
23/10/2026	**Task:** Added markdown content 1.5, 1.6, 1.7, 1.8

	Person In Charge: Raphael (Video Lead) **Result:**  **Learned: -** **Unresolved and What's Next: -**
23/10/2026	**Task:** Added markdown content 2.3, 2.4, 2.5 **Person In Charge:** Michael (Content Lead) **Result:**  **Learned: -** **Unresolved and What's Next:** - Use markdown syntax and formatting for content
23/10/2026	**Task:** Added markdown content for 1.9, 1.10, 1.11 **Person In Charge:** Kenneth (Quality Lead) **Result:**  **Learned:** How to simplify complicated topics into simpler words and analogies

	Unresolved and What's Next: - Continue with the markdown study guide
23/10/2026	**Task:** Fixed GitHub content conflicts **Person In Charge:** Jason (CIO) **Result:**   **Learned: -** **Unresolved and What's Next:** - Finish final markdown content V1.0 reviews
24/10/2026	**Task:** Reviewing markdown content 1.1-1.8 and 1.12-2.2 **Person In Charge:** Winrich (CEO), Jason (CIO), Michael (Content Lead), Kenneth (Quality Lead) **Result:** Reviewed content  **Learned: -** **Unresolved and What's Next:** - Fixing the rest of the pull request conflicts (For now, contents are added to the main branch manually).
24/10/2026	**Task:** Complete project logs, meeting summaries, and personal learning and work

	log **Person In Charge:** All Members **Result:** Finished project and personal log  The Code Theorist Logs Project Logs and Meeting Summaries (The Code Theorists) Stage I A. Project Logs Date / Details 19/10/2026 Task: Create rough project plans Person in Charge: Wirnich (CEO), Owen (Visual Design Lead), Raphael (Video Lead). Result: Rough outline and idea of project plans. Learned: Each other's strength, what's needed to be done for the project and our responsibilities in this project, and team workflow. Unresolved and What's Next: - Task list and research content distribution. - Setting up the initial Github repository **Learned:** Logs of any project work should be recorded or prepared for earlier to prevent any missing evidence (ex. deleted repository history). **Unresolved and What's Next:** - Complete the rest of the markdown content - Start planning ideas for the three deliverables

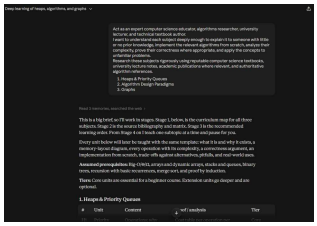

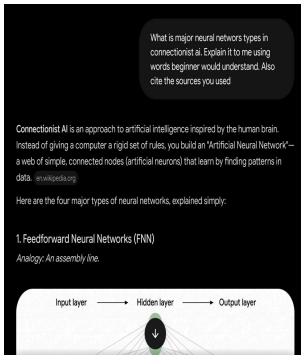

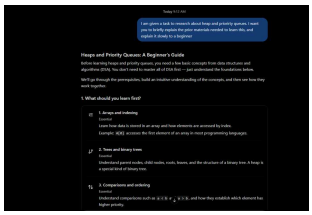

B. Meeting Summaries

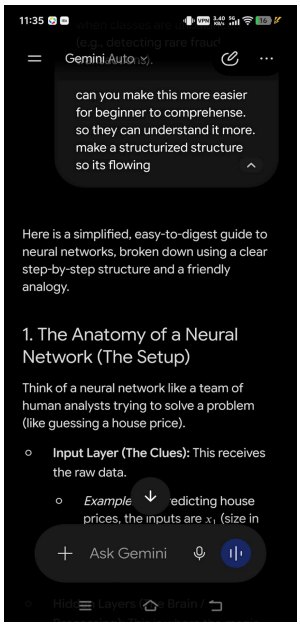

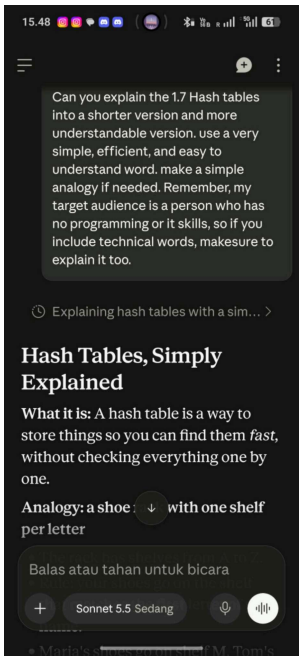

Evidence	Details
  (Rough project plan)  (GitHub repository)	**Meeting 1** **Date:** 19/10/2026 **Time:** 13:00-14:55 **Location:** 综教楼 B401 **Absentees:** None **Purpose**: 1. Coordinate initial team plans 2. Discuss project plans 3. Prepare local working environment (Git and VS Code) Ensure all members can access team GitHub repository **Discussion Points**: 1. How should roles and workload be distributed 2. Initial plans for learning materials and coordination **Outcomes**: 1. Divided team roles and responsibilities a. Winrich 王裕充 (CEO) b. Jason 庄翔俊 (CIO) c. Michael 张天龙 (Content Lead) d. Owen 彭世涛 (Visual Design Lead) e. Raphael 洪建民 (Video Lead) f. Kenneth 潘超凡 (Quality Lead) 2. Rough idea of how to structure content and workflow 3. All team members have set up local working environment 4. All team members have access to the team GitHub repository **Unresolved and What Next:** 1. Create finished project plan 2. Drafting and completing task list 3. Agree on content outline and project scope
 	**Meeting 2** **Date:** 23/10/2026 **Time:** 13:40-19:00 **Location:** 综教楼 B401 **Absentees:** None **Purpose:** 1. Finish Markdown V1.0 drafts 2. Work on project logs, meeting summaries, personal learning, and personal work. **Discussion Points:** 1. How should team logs be structured 2. Git Pull Request conflicts

(GitHub pull requests)  (Almost finished logs)	**Outcomes:** 1. 80% progress on project logs, meeting summaries, and personal learning and work logs 2. Some GitHub repository conflicts are fixed, but commit histories are gone. **Unresolved and What Next:** 1. Completing all logs 2. Last reviews for Markdown V1.0

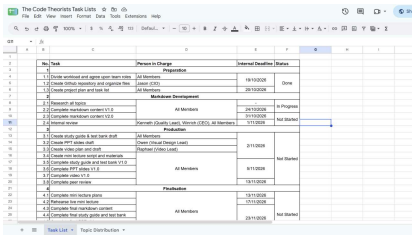

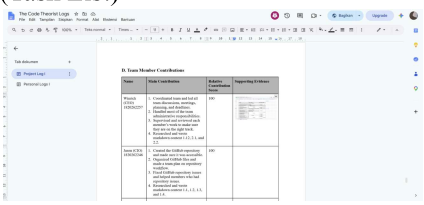

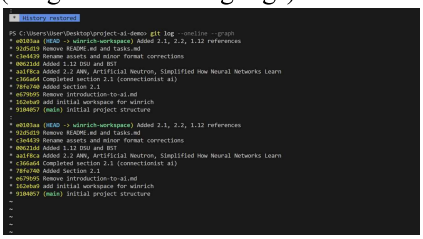

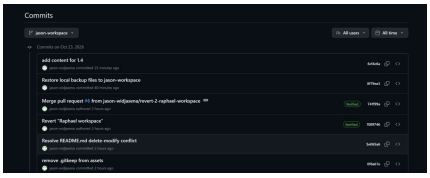

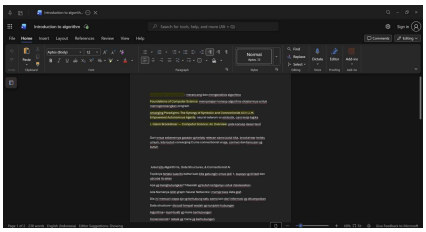

C. AI Use Logs

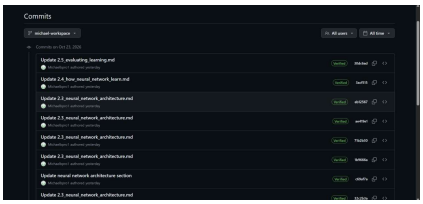

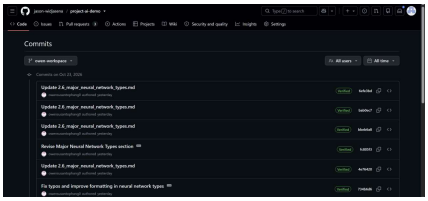

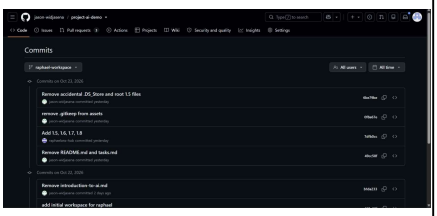

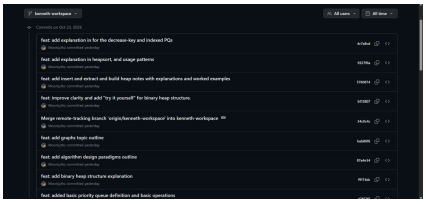

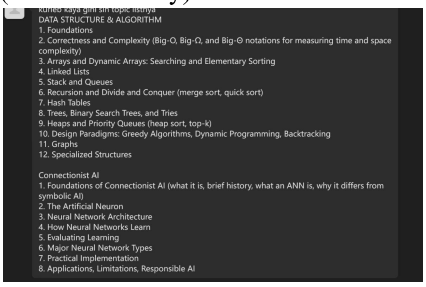

Date	Evidence	Details
20/10/2026		**Name**: Winrich (CEO) **Tools**: ChatGPT **Purpose**: Evaluating created content outline and asking advice on best suited video and mini lecture material. **Verification**: I cross-checked the general outline that ChatGPT gave me with the general structure that general computer science AI books give (ex. Foundations of Computer Science Fourth Edition), educational websites (GeeksforGeeks & W3Schools), and consulted members who made the content outline. **Outcome**: Came to the conclusion that since we are making a set of lesson materials targeted for beginners, - Core concepts need to be more heavily covered. Heavier math concepts are still going to get coverage, but more focus is going to be on the core concepts. - For the video and mini lecture, recursions could benefit a lot from a visual demonstration and breadth-first & depth-first search could be informative and engaging to explain live. This was used in the making of the project plan.
22/10/2026		**Name**: Winrich (CEO) **Tools**: ChatGPT **Purpose**: Understanding specialized data structures **Verification**: Cross-checked AI output and explanations with websites like GeeksforGeeks and W3Schools. - https://www.geeksforgeeks.org/dsa/balanced-binary-tree/ - https://www.geeksforgeeks.org/dsa/introduction-to-disjoint-set-data-structure-or-union-find-algorithm/ - https://www.w3schools.com/dsa/dsa_data_binarytrees.php To test my understanding, I tried to look at examples and apply the knowledge. For example, for balanced search trees, I searched for example binary trees and judged for myself whether they were balanced or not and why. **Outcome**: Used in the writing of markdown content 1.12 Specialized Structures. From this, I learned

		about disjoint set unions, binary trees, and self balancing binary search trees (AVL trees and red-black trees).
22/10/2026		**Name**: Kenneth Josafat (Quality Lead) **Tools**: Claude **Purpose**: Mapping out the topics to smaller sub-topics, understanding the content and their importance. **Verification**: I checked the subtopics the AI gave against some DSA books and I found that they are usually taught in similar order to help build understanding **Outcome**: I mapped out the content into the markdown files and modified some of them to help beginners understand better.
22/10/2026		**Name**: Owen Susanto Phang (Visual Design Lead) **Tools**: Gemini **Purpose**: To better understand the material 2.6 Major Neural Network Types. **Verification**: I checked the output from the source given by the AI and cross-checked it. I accepted all the output given by AI but some words are changed to make it more understandable and coherent. Referenced resources: - AWS (Amazon Web Services): "What is a Neural Network?" - IBM: "What Is a Neural Network?" - IBM: "What are Generative Adversarial Networks (GANs)?" - MathWorks: "What Is an Autoencoder?" - Towards Data Science / Medium: "Understanding LSTM Networks" - MIT Technology Review: "What are Spiking Neural Networks?" **Outcome**: The results were used to make 2.6 Major neural networks type. From the AI, I gained a better understanding on the topic.
23/10/2026		**Name**: Kenneth Josafat (Quality Lead) **Tools**: ChatGPT **Purpose**: Understanding briefly the prior topics to heaps and priority queues and their visualization **Verification**: I accepted the explanations that the AI gave and searched a few small things to deepen my understanding **Outcome**: Learned the prerequisites to my topics,

		mainly binary trees and how they work, the terms included (like leaf, nodes, etc.)
23/10/2026		**Name**: Michael (Content Lead) **Tools**: Gemini **Purpose**: Translate draft into a more beginner friendly version. **Verification**: Cross checked against another research: - Framework ML: PyTorch - Documentation / Tutorials TensorFlow Core - Documentation. CS231n: Convolutional - Neural Networks for Visual Recognition. **Outcome**: Change plain text material into a beginner friendly explanation. This was used in markdown content 2.3, 2.4, 2.5.
23/10/2026		**Name**: Raphael (Video Lead) **Tools**: Claude **Purpose**: Make a shorter, simpler explanation for people with no programming or IT background. To make my notes easier for a general reader to understand. **Verification**: Checked against Cormen, Introduction to Algorithms, 3rd ed., pp. 253-258 and 263 (hash tables, collisions, chaining, division method). **Outcome**: Turned the 1.7 Hash Tables notes into a short, simple explanation for readers with no programming background.

D. Team Member Contributions

Name	Main Contribution	Relative Score	Supporting Evidence
Winrich (CEO) 1820262257	1. Coordinated team and led all team discussions, meetings, planning, and deadlines. 2. Handled most of the team administrative responsibilities. 3. Supervised and reviewed each member's work to make sure they are on the right track. 4. Researched and wrote markdown content 1.12, 2.1, and 2.2.	100	 (Task List)  (Progress on creating logs)  (Commit history)
Jason (CIO) 1820262246	1. Created the GitHub repository and made sure it was accessible. 2. Organized GitHub files and made a team plan on repository workflow. 3. Fixed GitHub repository issues and helped members who had repository issues. 4. Researched and wrote markdown content 1.1, 1.2, 1.3, and 1.4.	100	 (Commit history) - Markdown content 1.1, 1.2, 1.3, and 1.4 (Original commit history was lost while fixing GitHub repository).
Michael (Content Lead) 1820262227	1. Evaluated collected learning resources and drafted team content outline along with Kenneth (Quality Lead) 2. Reviewed and paraphrased other team member's content so it's easier to understand. 3. Researched and wrote markdown content 2.3, 2.4, 2.5	95	 (Content outline notes)

			 (Commit history)
Owen (Visual Design Lead) 1820262252	1. Drafted team workflow plans and learning material plans 2. Reorganized logs to ensure best readability 3. Researched and wrote markdown content 2.6.	92	 (Commit history)
Raphael (Video Lead) 1820262212	1. Drafted the outline of each member's responsibilities and team workflow plans. 2. Reorganized logs to ensure best readability 3. Researched and wrote markdown content 1.5, 1.6, 1.7, 1.8	92	 (Commit history)
Kenneth (Quality Lead) 1820262213	1. Researched and wrote the team content outline 2. Reviewed content, content scope, and assisted other members with difficulties. 3. Researched and wrote very detailed markdown content for 1.9, 1.10, and 1.11 (Not yet merged with main)	100	 (Commit history)  DATA STRUCTURE & ALGORITHM 1. Foundations 2. Correctness and Complexity (Big-O, Big-Ω, and Big-Θ notations for measuring time and space complexity) 3. Arrays and Dynamic Arrays: Searching and Elementary Sorting 4. Linked Lists 5. Stack and Queues 6. Recursion and Divide and Conquer (merge sort, quick sort) 7. Hash Tables 8. Trees, Binary Search Trees, and Tries 9. Heaps and Priority Queues (heap sort, top-k) 10. Design Paradigms: Greedy Algorithms, Dynamic Programming, Backtracking 11. Graphs 12. Specialized Structures Connectionist AI 1. Foundations of Connectionist AI (what it is, brief history, what an ANN is, why it differs from symbolic AI) 2. The Artificial Neuron 3. Neural Network Architecture 4. How Neural Networks Learn 5. Evaluating Learning 6. Major Neural Network Types 7. Practical Implementation 8. Applications, Limitations, Responsible AI (Content outline draft)

*Further details and evidence can be found in project logs and personal logs.
